Stainless Steel Polish

PRODUCT OVERVIEW :

CLEANS, POLISHES AND PROTECTS

Stainless Steel Polish is a specialty plant based viscous liquid that cleans and polishes all types of stainless steel, as well as chrome and other metal surfaces.

A PROTECTIVE SHIELD

Leaves a tough protective shield which resists fingerprints, water spots, dust and dirt.

NON-SCRATCHING

Has no harsh abrasives to scratch surfaces.

NO OILY RESIDUE

Unlike ordinary stainless steel cleaners and polishes, there is no mineral oil residue left on the surface to attract dirt and dust.

COST SAVING

Aerosol stainless steel products are expensive to use. And, stainless wipes are about 35 cents per wipe. State Stainless Steel Polish does a great job ... at half the cost!

A LITTLE GOES A LONG WAY

Stainless Steel Polish comes in economical quart ready-to-use bottles. A small dab of the product polishes a large area — a single bottle cleans as much as three aerosols.

DIRECTIONS FOR USE :

With sprayer about ten inches from surface, spray a light mist over the surface. Wipe immediately with a clean, soft cloth. Do not allow spray to dry before wiping. For hard to spray surfaces, spray product on soft cloth and wipe as if dusting.

TECHNICAL DATA :

APPEARANCE: milky white

PHYSICAL STATE: viscous liquid

ODOR: odorless

pH: 7.5-8.5

DENSITY: 8.23lbs/gal typical

VOC CONTENT: 0%

PACKAGING

129238

1 QT Bottle/CS12
