Care For Work Environments[®]

PRODUCT OVERVIEW :

TWO-WAY ACTION

Cherry Float provides instant odor control by blanketing the water surface and not allowing the odors to permeate the air. Its refreshing cherry scent blossoms through the air and provides grease-busting power, preventing build-up of waste. With its two-way action, Cherry Float is the best choice for maintaining lift stations and sumps.

APPLICATIONS

Great for lift stations, sumps and sewage injection pits in office buildings, high-rise apartments, health care facilities and more. Cherry Float is safe to use, non-caustic, and non-corrosive.

DIRECTIONS FOR USE :

For sewage injection pits, lift stations, grease traps, and sumps: To control grease build-up, add enough Cherry Float to create a 1 to 2 inch layer on the surface of the water. Add more product as needed to maintain this layer.

Calculate using the following surface area formulas:

Rectangular Pits:

$$\frac{\text{Length (inches)} \times \text{Width (inches)} \times 1 \text{ or } 2 \text{ inches}}{231 \text{ cubic inches per gallon of product}} = \text{Gallons of product}$$

Circular Pits:

$$\frac{3.14 \times \text{Radius (inches)} \times \text{Radius (inches)} \times 1 \text{ or } 2 \text{ inches}}{231 \text{ cubic inches per gallon of product}} = \text{Gallons of product}$$

FOR DEODORIZATION: Cover water with a light film of Cherry Float. Use the previous formulas, but substitute 1/8 inch in place of the 1 or 2 inch layer. Add more product as needed to maintain this layer.

Note: Do not use in plastic pipes. Cherry Float's solvents may affect some paints and plastics.

TECHNICAL DATA :

APPEARANCE: red

SCENT: cherry

FLASH POINT: > 200°F (93°C)

EFFECT ON SEWAGE PLANT BACTERIA: none

SHELF LIFE: 2 years

PACKAGING

127602	55 GL Drum
127601	20 GL Drum
127600	5 GL Pail
